# The MEX Asset Register

# Optimise your Asset Management

MEX is the best in business when it comes to managing all types of assets. Designed to help make your life easier, the MEX Asset Register comprehensively captures all asset information from a unified platform.

## Decrease Downtime Costs

Asset Management is an important task that can save time & money. Equipment breakdowns can lead to costly repairs, asset downtime and less overall productivity.

Through implementing MEX, you can establish a PM Schedule to avoid costly downtime & lets you react faster when something goes down.

By tracking maintenance activities through MEX, you will be empowered to make more informed decisions and reduce any costly failures.
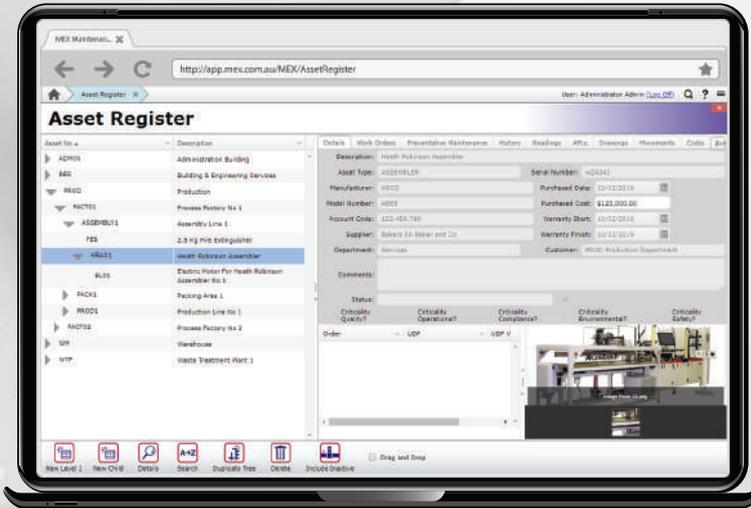

## Streamline Maintenance

As Maintenance Management is dynamic, MEX is also designed in this manner. Maintenance gets more and more complicated as an Asset ages, so it is essential to track all its related activities.

The MEX Asset Register is a go-to source for an asset's history and allows businesses to better manage it assets and use them to get the best possible returns.

MEX gives you the oversight to spot asset trends early on and solve any issues before they evolve into a bigger problem.

**Comprehensive Asset Information Capture**

**Extensive Asset Detail Recording**

**View Asset's Work Orders, PMs, Readings & More**
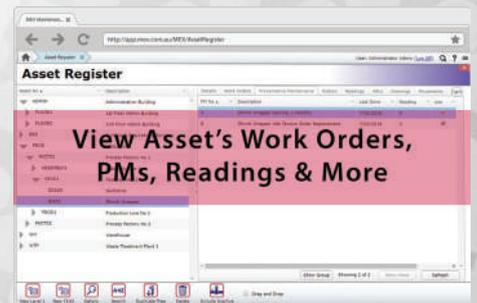

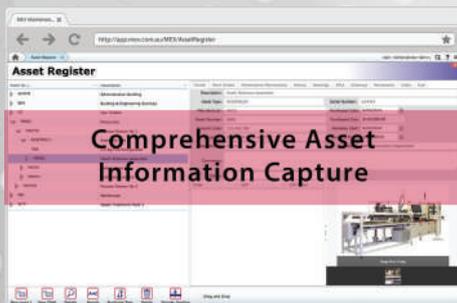

# Asset Management at its Best

Choosing the MEX Maintenance Solution can do wonders for your Maintenance Operation. Keeping a accurate and up to date Asset Register plays a very valuable role in assisting a business with maintenance planning & provides a vast amount of benefits.

## CONTROL CENTRE

The MEX Asset Register allows its users to setup a clear, concise and descriptive structure that provides a comprehensive overview of all assets and locations. A complete digital control centre is created to have all asset information in one, easy to access place making maintenance quicker, easier and more cost effective.

## COST MANAGEMENT

Capture associated costs, calculate asset depreciation and record time & money spent on repairs for each asset listed in the MEX Asset Register. By having the MEX Asset Register in place, you can improve how your business acquires its equipment and know exactly where your money is or should be going towards.
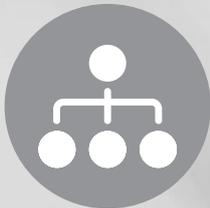

## LOGICAL HIERARCHY

By using a Hierarchical Tree Structure to logically organise assets it makes it quick and easy to identify assets and allows for more effective scheduling of preventative maintenance activities. With all this asset information in one place, managers can gather data, track trends & run reports to make better decisions.

## SCHEDULED MAINTENANCE

Manage all Scheduled Maintenance from a unified platform. Plan for productivity and know which asset needs maintenance, when and what specific job is required. Being able to view and add scheduled downtime for an asset helps to bridge communication gaps & builds a more effective maintenance plan.

## TRACK ASSET MOVEMENT

By tracking the movement of fixed and mobile assets, a business can optimise the utilisation of their assets and ensure they are safeguarded from any threats. Tracking assets will improve their reliability and allows Maintenance Managers to identify trends & create maintenance plans that balance cost & asset availability.

## ASSET CRITICALITY

Define which assets are critical and prioritise the assets that need to be more closely monitored and maintained. Implementing asset criticality with MEX allows you to make better decisions to align your maintenance efforts and more effectively respond to maintenance requests.
