

Bhagwan Marine

Servicing the Oil and Gas Industry

“We have been looking at a number of CMMS systems over the past 12 to 18 months and chose MEX purposely for its proven adaptation specific to the marine industry; flexibility in configuration to the marine terminology’s; cost in comparison with other more complex systems and more importantly user friendliness.”

In an industry that relies on efficiency and reliability to guarantee transport for its passengers, Marine Vessel Maintenance is a necessity for any operator. Bhagwan Marine Pty Ltd is one of Australia’s largest off-shore Oil and Gas support services, providing critical services such as Crew Change operations and Geotechnical operations off the West Australian coast. Bhagwan offer the very best in purpose built vessels incorporating the latest technologies and safety features.

With over 30 vessels in their fleet, Bhagwan Marine has enlisted MEX to help them with monitoring and reporting on their fleet. “Bhagwan Marine has experienced significant growth in our business over the last three years through a recent acquisition and further expansion of our fleet of vessels. It was apparently clear as a management group that our vessels and other business assets required a further level of sophistication in our manage-

ment tools to help improve the effectiveness and efficiencies necessary in maintaining our vessels and other assets.” Says Andy Cowan, QHSE Manager for Bhagwan Marine.

Although there is no shortage of Maintenance Systems in the market willing to monitor a fleet of marine vessels, MEX was the chosen solution because of its proven adaption to the Marine industry. Andy explains “We have been looking at a number of CMMS systems over the past 12 to 18 months and chose MEX purposely for its proven adaptation specific to the marine industry; flexibility in configuration to the marine terminology’s; cost in comparison with other more complex systems and more importantly user friendliness.” Through MEX’s ability to change any label in the system to reflect an industry, fast asset register creation through the asset wizard, and customisable reporting system, it can be easily adapted to become an industry specific maintenance system in just a few clicks.

Bhagwan Marine expects MEX to help them in the areas of reporting and monitoring historical data, saving them time and money on maintenance tasks, as well as providing information to develop future strategies. “MEX will help provide more accurate means of measuring and analysing each vessels performance against our budgetary estimates including improved visibility of planned survey’s costs and improved estimates in our periodic refits. The historic data collected will be invaluable in our future planning strategies to become more efficient particularly in managing out of water surveys and refits.”
