BUG FIXES

Work Orders
- Audit issue when browsing from Audit -> Asset Details and then back to Work Order Details is now fixed and will now navigate correctly.
- Asset Hierarchy now displays correctly on the Work Order Report in all situations.
- Performance improvement in Work Order Details load.
- Fixed Preventative Maintenance last done date and last done reading are now set correctly when closing a Work Order to history.
- Closing Work Orders and opting to not add history will now save the correct closed by contact against the Work Order.
- Applying and removing filters on the Quick Edit listing will no longer cause it to get stuck.
- Custom Fields being added to the Work Order details custom tab will no longer be moved back to the Work Order details tab.

Global Search
- Global Search layout has been updated to display links better.

General
- MEX Support User will no longer utilize a MEX license.
- Legacy items can now be removed from the MEX hamburger menu via a web config key including:
  - Edit Security
  - Edit Change Names
  - Custom Fields
  - Download Extension Server
  - MEX Out of Browser
- MEX Help in MEX menus have now been renamed to MEX User Guide.
- Get Support in the menu now brings up a popup window with the MEX Support details.
- MEXSupport.exe has now been updated so it will no longer be flagged by anti-virus utilities.
- Custom Control type custom fields can now have script tags entered in them.
- You can now add links to documents and open them without issue.
- Opening the UploadService.asmx page will no longer show a compilation error.
- Special symbols no longer disappear on local file path documents after saving.

Custom Fields
- Custom field data now saves correctly in the Catalogue Details Custom tab.

Reports
- Work Order Statistics report has now been fixed and updated on the MEX Report Library.

MEX Mobile
- Work Orders will now sync correctly on fresh installations.

Preventative Maintenance
- Labour costs will now update after a trade line is deleted from a PM.
- The popup will always appear when manually raising a Work Order from a Maintenance Policy.

Stores
- Purchase Order lines no longer cap out at 300.
- Reservations can no longer be issued multiple times when open in multiple windows.

Notifications
- Prestart Completed notification email no longer duplicates lines for major and minor defects.

Timesheets
- Assigning a Work Order to a Timesheet line will add the correct trade lines to the Work Order on processing the Timesheet.

Reports
- Report printouts now take the client's time zone into account for dates.
